Atlas Greenhouse Acquires Stuppy Greenhouse, Creating an Industry-Leading U.S. Greenhouse Manufacturer

ALAPAHA, GA & KANSAS CITY, MO — Atlas Greenhouse today announced the acquisition of Stuppy Greenhouse, bringing together two of the most respected names in commercial greenhouse manufacturing. Together, the companies represent nearly 200 years of combined industry knowledge and experience, creating one of the strongest greenhouse manufacturers in the industry — proudly producing U.S.-made greenhouse solutions.

This strategic combination unites two highly complementary brands into one robust offering that expands options and delivers more comprehensive solutions for customers across all major end markets and geographies. Customers will continue to have full access to both the Atlas and Stuppy product lines, supported by the same trusted teams, engineering expertise, and service standards they have come to expect.

"Our focus is simple – strengthen what customers already value while expanding what we can deliver," said John Edwards, CEO. "By combining Atlas and Stuppy, we bring together decades of engineering excellence, manufacturing capability, and customer commitment. This is a win for our customers and a win for the industry."

Matt Stuppy, the fifth-generation owner of Stuppy Greenhouse, added, "Customer confidence has been the focal point of the Stuppy family for 153 years. That confidence can only be achieved through collaborating with customers, employees, and industry partners to provide solutions that provide real value. Given the cultural fit and aligned values of both organizations, I believe we will be able to quickly continue to innovate complete solutions and provide meaningful resources to greenhouse users of all sizes across all end markets."

Both Atlas and Stuppy have long been recognized for manufacturing high-quality greenhouse structures in the United States. Together, they reinforce a shared commitment to American-made products, integrity, innovation, and long-term value. The combination of these two strong brands further solidifies their leadership in U.S.-manufactured greenhouse solutions.

The combined company will continue to support a diverse and growing customer base, from agriculture and ornamental commercial growers to retail garden centers, educational institutions and research facilities. Across each segment, customers will benefit from a broader and more integrated product offering, enhanced engineering and technical expertise, and a continued commitment to helping them improve efficiency, increase productivity, and achieve their financial and operational goals.

###

ABOUT ATLAS GREENHOUSE

Founded in 1986 and headquartered in Alapaha, Georgia, Atlas Greenhouse is a leading U.S. manufacturer of commercial and residential greenhouse systems. Serving commercial growers, nurseries, cannabis cultivators, vegetable producers, retail garden centers, educational institutions, and hobbyists, Atlas delivers structurally sound, American-made greenhouse solutions designed for performance and longevity. With more than 120,000 square feet of manufacturing and warehouse space, the company is known for production capacity, strong inventory positions, competitive lead times, and responsive customer support. Atlas Greenhouse remains committed to innovation, engineering excellence, and helping growers maximize operational success.

ABOUT STUPPY GREENHOUSE

Founded in 1873 and headquartered in Kansas City, Missouri, Stuppy Inc. is one of the most established and respected names in the greenhouse industry. For more than 150 years, Stuppy has designed and manufactured high-quality U.S.-made greenhouse structures serving commercial growers, retail garden centers, specialty operations, education, and research institutions. Recognized for engineering expertise, craftsmanship, and long-standing customer relationships, Stuppy has built a legacy rooted in innovation and reliability. The company remains dedicated to delivering durable greenhouse solutions that support grower productivity and long-term financial success.
